 **Publishing with GitHub Pages, now as easy as 1, 2, 3** 

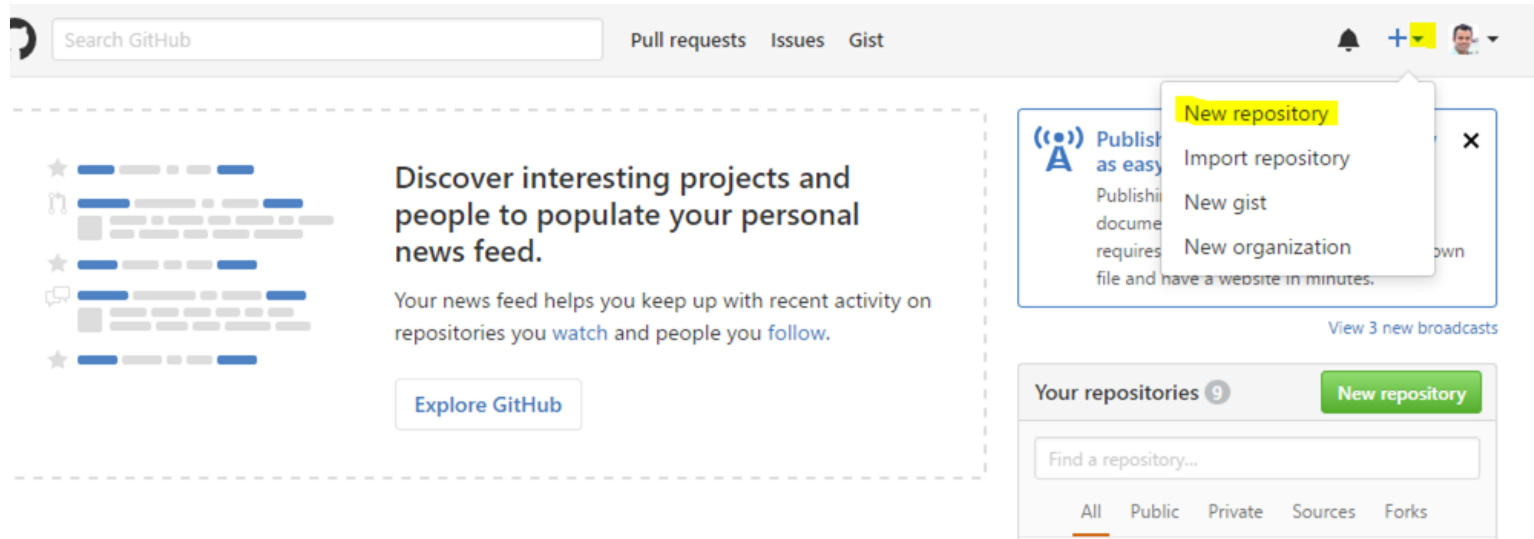

Publishing a website or software documentation with GitHub Pages now requires far fewer steps. Commit a Markdown file and have a website in minutes.

Click on arrow & click on “New Repository”

Make a Repository Name. This is your project name. You will provide a url by this name

Owner Repository name

 faridrony ▾ / 

Great repository names are short and memorable. Need inspiration? How about **crispy-potato**.

Description (optional)

☒  **Public**
Anyone can see this repository. You choose who can commit.

☐  **Private**
You choose who can see and commit to this repository.

Make it Public and check the “Initialize this repository with a README” & click “Create Repository Button”

☒ **Public**
Anyone can see this repository. You choose who can commit.

☐ **Private**
You choose who can see and commit to this repository.

☒ **Initialize this repository with a README**

This will let you immediately clone the repository to your computer. Skip this step if you're importing an existing repository.

Add .gitignore: **None** ▼

Add a license: **None** ▼

Create repository

After creating the repository You will show this part and click on Upload button
